Goals	Successful Product, High customer satisfication, Good Teamwork
Meeting norms	Be on time on agreed meetings
Working norms	Transparency, Clear Documentation, Openess, Trust
Coordination norms	Tell the POs if something comes up (organisational/meetings)
Communication norms	Check communication channels daily (WhatsApp, Discord)
Consideration norms	POs: are responsible for the order and relevance of the to be implemented features, SDs: are responsible for the implementation and all technical aspects of the project, SM: is responsible for the organization of the SCRUM
Cont. improvement norms	SDs: we will be having a main branch where the working code from the previous sprints will be located. For the current sprint of branch dev will be created. SDs working on features will create new branches from the dev one: at the end of the sprint these branches will be merged into dev again and after reviewing it finally into main

Product Vision	Project Mission
With the increase of data exchange between organizations and other independent instances such as finance, legal, healthcare, government, etc the need of ease of data interoperability while still adhering to data usage, policies, and compliance to local legalizations is becoming significant. Dataspace is the envisioned solutions to tackle these challenges.	Explore the feasibiltiy of dataspace usage with regards to data sovereignty. This includes the testing the maturity of dataspace, which components are important and ease of deployment

Term	Definition
Data Sovereignity	
Dataspace	
Dataspace	
(EDC) Connector	
Metadata Broker	
Catalog	
Policy	
Contract	

Sprint #	Sprint goal
1	Understanding the concept of Dataspace and it's components
2	Run samples of EDC Connector (Team 1) and Gaia-X framework samples (Team 2)
3	Build the Kubernetes pipeline for automatic deployment in collaboration with DATEV
4	Start establising frontend framework early
5	Continue with the frontend framework and make the application user friendly
6	Prepare for mid-project release
7	Documentation & refactoring
8	Decentralising the connector, creating web frontend for each connector, and start transfering the data
9	
10	
11	
12

15	

Sprint	Goal	Feature Name	Est. Size	Est. Remaining	Real Size	Real Remaining
Release						
Total			88	88		
Sprints						
1	Understanding the concept of Dataspace and it's components		10	88	10	88
2	Run samples of EDC Connector (Team 1) and Gaia-X framework samples (Team 2)		13	78	13	78
3	Build the Kubernetes pipeline for automatic deployment in collaboration with DATEV		16	65	12	65
4	Start establising frontend framework early		8	49	13	53
5	Continue with the frontend framework and make the application user friendly		15	41	15	40
6	Prepare for mid-project release		26	26	26	25
	Sum					
Features						
1	**Understanding the concept of Dataspace and it's components**					
	Gain understanding of Gaia-X		5		5	
	Research connector concepts and the EDC connector repository		5		5	
2	**Run samples of EDC Connector (Team 1) and Gaia-X framework samples (Team 2)**					
	Eun EDC connector samples		8		8	
	Gain more understanding of Gaia-X		5		5	
3	**Build the Kubernetes pipeline for automatic deployment in collaboration with DATEV**					
	Create two connector instances		3		3	
	Transfer data on localhost		5		3	
	Create docker image output		5		3	
	Create documentation for the localhost connection process		3		3	
4	**Start establising frontend framework early**					
	Establish a frontend framework		8		13	
5	**Continue with the frontend framework and make the application user friendly**					
	Establish a frontend framework		8		13	
	Create build process video		2		2	
	Create a button in the frontend which runs the CLI automatically		5			
6	**Prepare for mid-project release**					
	Create a fuctioning button to establish a two-connector-connection		5		3	
	Open three ports for three connectors		2		2	
	Create UI design for login page		3		3	
	Create UI design for connector		5		5	
	Create UI frontend of the connector page		5		5	
	Create / Update the Dockerfile		3		5	

Sprint	Goal	Feature Name	Est. Size	Est. Remaining	Real Size	Real Remaining
	Test connector configurations		1		1	
	Response - bug fix		2		2

#	Feature Definition of Done	Sprint Release Definition of Done	Project Release Definition of Done
	Product Owners approved of the features	There is no major regression compared to previous release	Same as sprint release
	Software Developers agree to release the features	All Software Developers agree to release	Relevant features have been documented and put into the wiki
	All acceptance criteria need to be met	Release Manager set the tag to release	Bugs should be kept as minimal as possible
	Pull request has been reviewed, approved, and merged into the main branch	Application should be able to be executed	

#	Context	Name	Version	License	Comment
1	Connector	EDC Connector	0.6.3	Apache-2.0	
2	Docker

How to play planning poker							
1. Everyone type their number into their value field, don't hit return yet							
2. Someone, perhaps a product owner, count down 3.. 2.. 1..							
3. Then, everyone hit return to submit their value
